Greetings from President Bradley Bursch, MD

Welcome to the April Edition of Our E-Newsletter!

Bradley Bursch, MD

We are happy to bring you our latest e-newsletter, with several specialists' articles, an interesting piece in our "Doctor in Training" column, as well as news about our programs for 2016. It is shaping up to be a very exciting year for LAPS. Our 1st Annual S. Michael Marcy, MD Memorial Lecture at the Parmelee Spring Meeting is fast approaching and our featured speaker, renowned pediatric immunologist and infectious disease specialist, Dr. Margaret (Meg) Fisher is sure to be entertaining and informative.

Just a few weeks ago I had the distinct pleasure of meeting with Joan Marcy, Dr. Marcy's widow, to discuss the lectures. Once again I was inspired by Dr. Marcy's ongoing legacy of mentorship, which as a result of this annual lectureship, will continue even after his death. This lecture will be hosted at Providence Tarzana Medical Center on Thursday, May 5 and will address the timely topic of vaccines.

On September 23-25, 2016, the 73rd Annual Brennemann Lectures will be held at a new location, the Disneyland Hotel. We look forward to hearing from current LAPS Board member, Patrick Whelan, MD, PhD on Rheumatology, Wendy Mitchell, MD on Neurology, and we welcome back Robert Wells, PhD who will address timely topics in Behavioral Psychology. We think it will be an exceptional event!

This summer, with your help the Eve & Gene Black Summer Medical Career Program will continue to expose high school students to the exciting possibilities of a future in medicine. Every year we are amazed by the quality of the applicants and each
I am proud to be part of a society which has been engaged for so many years in the Los Angeles community, supporting the medical professionals who provide the care of so many children. And I thank YOU for being a part of this great organization.

- Bradley Bursch, MD, FAAP

### Specialists' Corner

"Z is for Zika"

Dr. Whelan has a pediatric rheumatology practice in Burbank, and lectures at Keck/USC School of Medicine on immunology and immunodeficiency.

Patrick Whelan, MD, PhD

As the summer travel season approaches, along with the Western Hemisphere's first Summer Olympics in twenty years, the Zika Virus has brought attention like never before to the potential menace of mosquitos. **But how anxious should parents be about this threat, and what can be done to stop it?**

Zika is a small RNA virus related to the Yellow Fever virus, and is also a distant cousin of Hepatitis C. All three reside in the Flaviviridae family that also includes Dengue and West Nile. Apart from HCV, these other viruses can be spread by aggressive tiny black-and-white-striped Yellow Fever mosquitos (Aedes aegypti) and Asian Tiger mosquitos (Aedes albopictus) that bite both day and night.

These mosquitos do reside in Los Angeles County. Asian Tiger mosquitos first came to California in 2011 and Yellow Fever mosquitos in 2013. Both species spread widely during 2015, and are currently found in pockets around Whittier, East Los Angeles, Boyle Heights, Silver Lake, and La Canada/Flintridge. However, for these mosquitos to spread Zika, they have to bite someone who became Zika-infected in an endemic area - usually in Brazil or other parts of Latin America and the Caribbean.

Running Safety 2016

Tracy Zaslow, MD
Medical Director, Sports Medicine Program in Children's Orthopaedic Center (COC) at Children's Hospital Los Angeles

Top 10 Tips for Running Safety

Running is a great way to stay fit and enjoy the outdoors. With summer right around the corner, there's no better time to start a great fitness habit. And, running doesn't have to be just for adults; children, with appropriate supervision, can safely enjoy running too. Here are some tips to help your patients and their families stay safe and avoid injury.

1) Erase the "no pain, no gain" mantra. Athletes should never be encouraged to play through the pain and running is no different. While muscle soreness does occur during training, the soreness should not increase during a run; if pain is increasing with activity do not continue the activity. And, when the pain is in any joints (hips, knees, ankles, etc.) or associated with swelling, further evaluation by a sports medicine physician for possible injury is advised.

CASE - Pink Nodule on a 10 year old Girl

We are always looking to expand our organization. Please encourage your fellow Los Angeles doctors to become LAPS Members.

Remember that a One Year Membership is FREE to all Graduating Residents!

Help us better serve you and all of our members.

1. What specific subjects/topics would you like to see addressed in LAPS CME meetings and/or in our newsletters?

2. Would you be willing to speak at a meeting or submit an article?

Please submit your articles or suggestions for topics for future meetings by:
Fax: (310) 782-9856
or email: meosborne@lapedsoc.org
A checklist of suggested topics is available here. (You may download, complete and email, fax or mail to LAPS)

The Eve & Gene Black Summer Medical Career Program

If you would like to learn more about the program, please visit Summer Program Explanation and Activities. In this document you can find information about how you can become involved in this program by hosting students in your offices/practices.

We thank our many members and donors for their past support. (Please click here Donors and Sponsors if you wish to view for a list of our current donors.) We hope we can continue to count on you and your generosity. And for those that are not yet involved, we hope you will join us. Your efforts will forever change the face of the future of medicine in Los Angeles!

Tsipora Shainhouse, MD FAAD, (D)ABP, FRCPC (Pediatrics, Dermatology)

A 9 year old girl was referred to dermatology for evaluation of a persistent pinkish bump on her neck, that has been present for at least 6 months. It is not itchy or painful. It doesn't crust, but it might have bled. She has no other similar lesions, and does not recall antecedent trauma. She is a red-headed, green-eyed girl with freckles and fair skin that burns easily in the sun. Her skin does not tan, and she describes multiple mild sunburns, and at least one very painful sunburn. She wears sunscreen on vacation and most weekends when she is going to be outdoors. She knows that her grandparents have been treated for skin cancer, and that her mother has had multiple funny moles biopsied. She does not know of any family history of melanoma.

What is your diagnosis?

A. Pyogenic granuloma
B. Spitz nevus
C. Juvenile Xanthogranuloma
D. Pediatric melanoma

Still time to register!
May 5, 2016
Presenting the First
It was 5 AM in Mtunthama, Malawi. As I had done every morning since my arrival in this remote outpost three weeks earlier, I began my day with a run to watch the sunrise and clear my head before heading to the village hospital. Normally, I would welcome the wide-eyed greetings of the locals waving and yelling "Mzungu", which means "White Person". Customarily, I would reply "Mwatzuka Bwangi", which is "Good Morning" in the local Chichewa language. But this morning was different. The fly that had endlessly circled my mosquito net looking for an opening reflected my troubled sleep. Wabwino, the rapidly declining patient, occupied my unsettled thoughts. My strides beat out her name-Wa-bwino, meaning "Go with God."

Wabwino was only 2-1/2 years old when she arrived at the clinic a week earlier, brought there by her grandmother. The toddler was later admitted to the hospital for severe
marasmus, a form of malnutrition that is all too common in impoverished countries. When I first examined Wabwino in her hospital bed, she was emaciated with each rib visible beneath her fragile skin. But it was her respiratory distress later that day that prodded the medical officers in charge of her care to urgent action.

The 47th Annual Eve & Gene Black Summer Medical Career Program is underway!

This year LAPS received a record number of 450 applications to the 47th Annual Eve & Gene Black Summer Medical Career Program and 67 participants were selected! On April 20, LAPS sponsored an Orientation Dinner at Martin Luther King, Jr. Outpatient Center for 120 selected participants, parents and facility coordinators. We would like to thank the King Program Coordinator, Lorraine Grey as well as Volunteer Services Coordinator Denise Gordon for their help in organizing the orientation, as well as former participants, Jennifer Devries and Jessica Ito for sharing their program experiences with this year’s selected students.

We would also like to thank the following people, listed below, who expertly and tirelessly guide the participants through the long and complicated application and clearance process. They are valuable members of our team and work closely with the Program Coordinators and LAPS Administration to ensure that the students are selected, screened, scanned, badged, oriented and in all ways ready for their first day!
